Master Programme in Architecture

Programme code: TAMAR
Scope: 120 credits
Cycle: Second
Approved by: Programmes board D
Validity: 2014/15
Date of approval: 26 May 2014
In addition to the syllabus, general regulations and information for the Faculty of Engineering apply to this programme.

1 Aim and learning outcomes

1.1 Aim
Architecture deals with the quality of the space people create for their lives. How these environments are designed and developed constitute the central focus area. Building these spatial contexts with long term sustainable properties is a goal in itself. The education aims to provide the student with:
- Artistic and technical high-quality knowledge of spatial design, with the physical constructed reality as intention,
- Ability and insights concerning innovation and new thinking,
- Insights into the architect’s different work areas and their relationship to society,
- An empirical and scientific basis for creative and critical approach to the profession, architecture and society.
The programme combines an explicit international orientation with a firm foundation in the local context.

1.2 Outcomes for a Degree of Master of Science (120 credits)
(Higher Education Ordinance 1993:100)
Knowledge and understanding
For a Degree of Master of Science (120 credits) the student shall
- demonstrate knowledge and understanding in the main field of study, including both broad knowledge of the field and a considerable degree of specialised knowledge in certain areas of the field as well as insight into current research and development work, and
- demonstrate specialised methodological knowledge in the main field of study.

Competence and skills
For a Degree of Master of Science (120 credits) the student shall
- demonstrate the ability to critically and systematically integrate knowledge and analyse, assess and deal with complex phenomena, issues and situations even with limited information
- demonstrate the ability to identify and formulate issues critically, autonomously and creatively as well as to plan and, using appropriate methods, undertake advanced tasks within predetermined time frames and so contribute to the formation of knowledge as well as the ability to evaluate this work
- demonstrate the ability in speech and writing both nationally and internationally to report clearly and discuss his or her conclusions and the knowledge and arguments on which they are based in dialogue with different audiences, and
- demonstrate the skills required for participation in research and development work or autonomous employment in some other qualified capacity.

Judgement and approach
For a Degree of Master of Science (120 credits) the student shall
- demonstrate the ability to make assessments in the main field of study informed by relevant disciplinary, social and ethical issues and also to demonstrate awareness of ethical aspects of research and development work
- demonstrate insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used, and
- demonstrate the ability to identify the personal need for further knowledge and take responsibility for his or her ongoing learning.

1.3 Further studies
On completion of the second-cycle degree, students have basic eligibility for third-cycle studies.

2 Programme structure
The Master Programme is built up from existing courses at the advanced level of the Architecture programme. Different combinations of these courses give different specialisations:
- Advanced Architectural Design
- Architectural Conservation Design
- Human Shelter - Urban Space
- Spatial Experiments
Each semester includes a design studio project of 15 credits, a connected design theory course of 7.5 credits and an elective course of 7.5 credits. One of the elective courses must be chosen from the pre-research profiled/labelled courses.

2.1 Courses
The courses included in the programme are indicated in the timetable. In addition to these courses, students are entitled to accreditation of at least 7.5 credits of courses in Swedish (organised by Lund University for exchange students).

2.2 Levels
The courses on the programme are divided into levels. The level is indicated in the relevant course syllabus. The relevant levels are first cycle (G) and second cycle (A). These levels are defined in the Higher Education Act, Chapter 1 Section 8-9. First-cycle courses at the Faculty of Engineering are further subdivided into First cycle 1 (G1) and First cycle 2 (G2). G2 courses presuppose knowledge acquired on G1 courses.
Second-cycle courses may constitute specialisations in a Master's degree.

2.3 Grades
Grades are awarded both for entire courses and for course components, when applicable. Course components are indicated in the relevant syllabus. Grades for an entire course are awarded according to a scale of two grades (Fail, Pass). If another scale of grades is applied, this is indicated in the course syllabus. Only entire passed courses (according to the two-grade scale) are included on the degree certificate. Grades awarded in Swedish higher education are criterion-related, i.e., the performances of students are assessed with reference to the relevant learning outcomes and no internal ranking of students is made.
3 Specific admission requirements

3.1 Admission requirements
To be admitted to the programme, students must have a Bachelor of Architecture, 180 credits, or equivalent. A specific requirement is that applicants submit a digital portfolio of their own work in architecture. The portfolio must clearly prove that the applicant has good potential to benefit from the programme. The selection for admission is based on the assessment of a submitted portfolio. Students must also have documented proficiency in English corresponding to at least English 6 in Swedish upper secondary school.

3.2 Selection
The applicants' portfolios are the main criterion for selection. Special attention is paid to the design skills and architectural understanding of the applicant.

4 Degree

4.1 Degree requirements
For a degree of Master of Science in Architecture students must successfully complete 120 credits within the specialisation of their choice, including a degree project worth 30 credits. 75 credits must be second-cycle credits, including the degree project. At least one of the elective courses AFO N25 Performing Theories or AFO N30 Architecture as Temporal Landscapes must be included.

4.1.1 Degree project
For a Degree of Master of Architecture (120 credits) the student must complete an independent project (degree project) of no less than 30 credits as part of the course requirements. The degree project must be completed in accordance with the valid course syllabus and must deal with a relevant subject. The student may commence work on the degree project when at least 75 credits of courses can be included in the degree.

4.2 Degree and degree certificate
When students have completed all the degree requirements, they are entitled to apply for a degree certificate for a

5 Special regulations

5.1 Semester structure
The Master's programme in Sustainable Urban Design is not divided into study periods. This means that teaching is scheduled throughout the semesters.

5.2 Field exercises
The teaching includes study trips, inventories, surveying, environmental studies etc. as an integral part of the training. Any costs related to these activities are to be covered by the students themselves.

5.3 Portfolio
The students are to collect their blueprints and other materials in a portfolio dedicated to the purpose that is to be available for assessment.
